1. Introduction

The Picture Upload Plus field type allows you to select an image via a selector tool. In contrast to the picture upload field type it's possible to add a set of images. By default the SharePoint does not support a picture field type.

The picture upload supports MOSS 2007/WSS 3.0.

2. Product Overview

After installing the Picture Upload Plus field type, a new Share Point field type is available for using. Furthermore the Picture Upload field type is included to.

Figure 1: Adding the field type to a list

The new field type offers different configuration properties:

- Picture width in pixel
The width of the displayed pictures can be customized.

- Count of columns
The pictures are divided into different columns. The amount of columns can be customized.
- Show description for pictures
The description of the pictures can be displayed under the pictures in the display mode.

The Picture Upload Plus can be used like any other field type in different lists or document libraries.

Adding a picture is quite easy – just click the button *Browse...* select a picture, enter a description and click the button *Add picture*. It's possible to upload several pictures to an image library. After uploading it's quite simple to select an image and click the *OK* button.

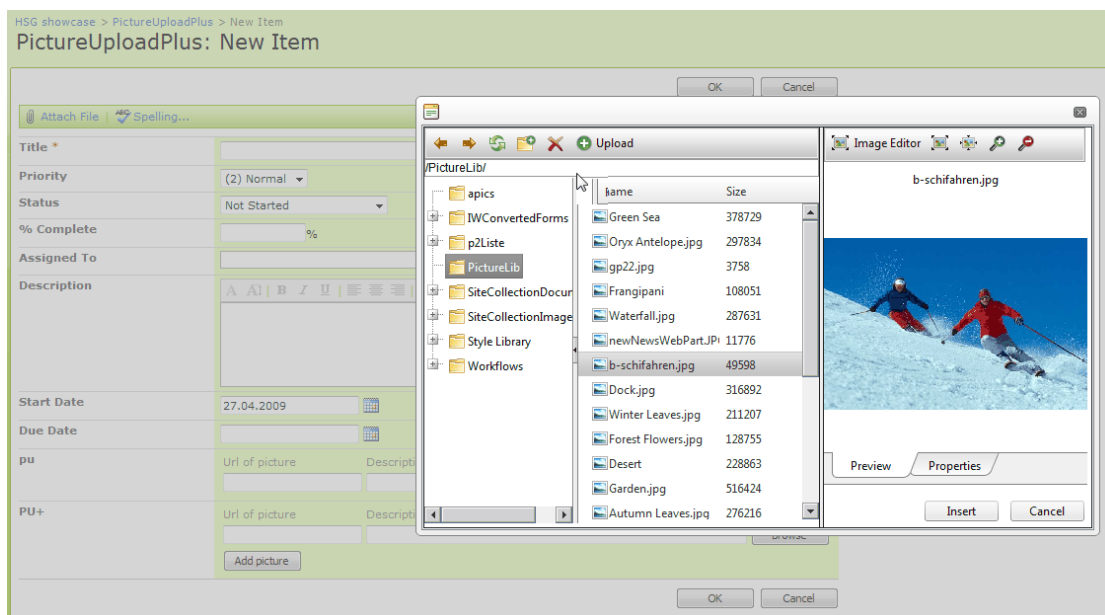

Figure 2: Browsing a picture

There are 2 different file browser dialogs available.

2.1. MOSS file selector dialog (only MOSS)

The MOSS file selector is the standard file selector of SharePoint. The MOSS file selector is not available on WSS3.0. By default the MOSS file selector is used (Figure 3).

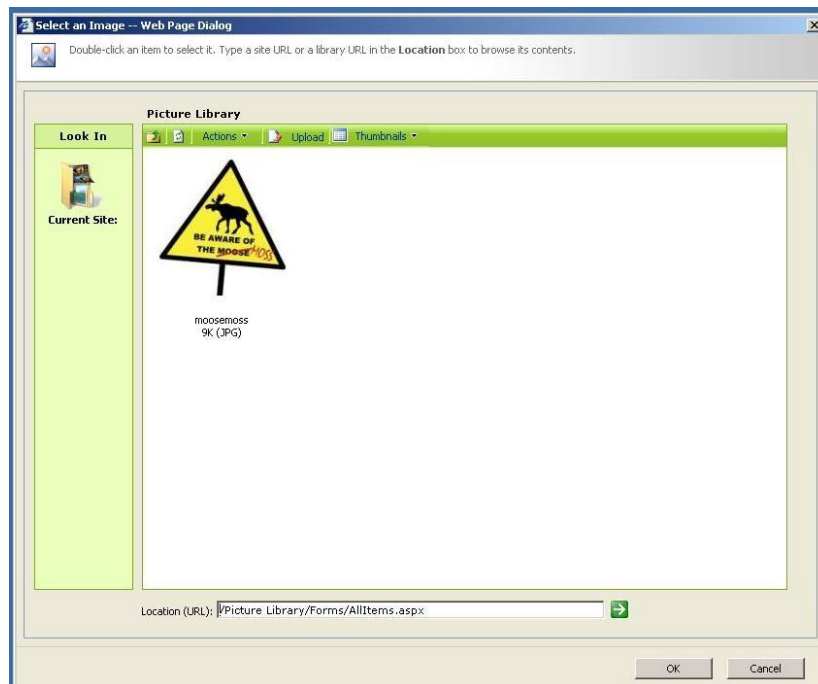

Figure 3: MOSS standard file selector

2.2. AJAX picture upload dialog

If Picture Upload is working on MOSS, both the MOSS standard file selector in Figure 3 and the AJAX Picture Upload dialog in Figure 4 are available. If running WSS 3.0 only the AJAX Picture Upload dialog is available. The AJAX dialog displays pictures in picture and document libraries in the current web.

Advantages of AJAX picture upload dialog:

- Upload pictures from local file system
- Create, delete folders
- Delete pictures from Picture Libraries
- Image Editor for easy resizing of pictures

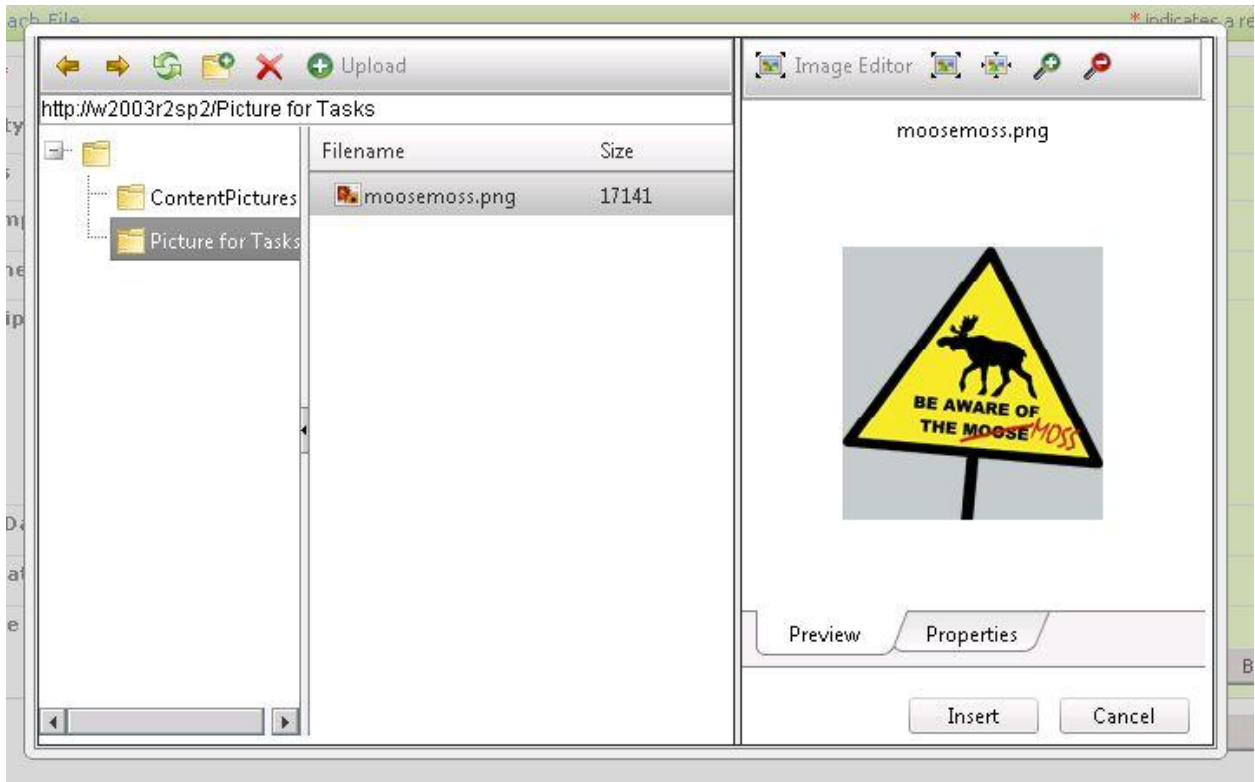

Figure 4: AJAX Picture Upload Dialog

By clicking *Insert*, the URL of chosen picture is inserted. After saving the items, the picture is shown in the display view of the item as follows.

2.3. Picture Upload Plus in display mode

In edit mode only the URL and the description of the images are shown. That changed in display mode – the pictures are rendered in image mode and the description is displayed as tooltip if the cursor is moved over an image.

3. Installation Guide

3.1. Server requirements

A functional server with either Microsoft Windows SharePoint Services 3.0 or Microsoft Office SharePoint Server 2007 is required.

3.2. Installation

The standard install path to WSS 3.0 or MOSS 2007 is *C:\Program Files\Common Files\Microsoft Shared\web server extensions\12* and all necessary program components are installed there.

1. Login to the front-end server of your SharePoint farm as local administrator.
2. Extract the files from the zip folder.
3. Double click the setup.bat file to run the setup. If you do not want to create a log file during the installation you can also double click the msi file to run the setup.

ATTENTION: User must be local administrator and farm administrator!

4. The IIS reset is automatically done by the setup process.
5. If an error occurs during the installation, please read the FAQ's in section 5.
6. Install the SharePoint Picture Upload Plus on each front-end server of your farm and repeat step 1 to 4.
7. Now you are ready to use the SharePoint Picture Upload Plus.
8. To use AJAX picture upload dialog (optional for MOSS and required for WSS) configure the Telerik Controls described in section 3.3.

3.3. Configuration for AJAX Picture Upload dialog (optional on MOSS)

To activate the AJAX Picture Upload dialog it is necessary to activate Telerik Controls by activating web application features. The configuration of Telerik Controls is described in the documentation of the HSG SharePoint Web.Config Modifier.

4. Component Activation

In order to register and activate your components start the HSG Activation Wizard.

Figure 7: Activator

Copy the displayed activation key to your clipboard and send it to licensing@hagenberg-software.at or simply click on the displayed link. You will receive an activation file, which can be imported using the Activator.

5. FAQ – Errors and configuration settings

- 1) The following error occurs during the product setup:
 - a) **“This installation requires WSS 3.0 or MOSS 2007.”**
WSS 3.0 or MOSS 2007 could not be found on your target system. Please install one of these products and retry the installation.
 - b) **“You need to be a farm administrator to install SharePoint Picture Upload.”**
You are not a farm administrator of the current WSS 3.0/MOSS 2007. Please be sure, that you have the sufficient rights and retry the installation.
 - c) **“You need to be an administrator to install SharePoint Picture Upload.”**
You are not an administrator of the target system. Please be sure, that you have the sufficient rights and retry the installation.
 - d) **“This installation requires HSG Web.config Modifier for Ajax 3.5.”**
HSG Web.config Modifier for Ajax 3.5 is not installed on your target system. Please install the product and retry the installation. The setup can be downloaded from <http://www.hagenberg-software.at>.

	Installation and user guide	Version 2.0
	SharePoint Picture Upload Plus	Page 10 of 12

e) "This installation requires HSG Web.config Modifier for Telerik." HSG Web.config Modifier for Telerik is not installed on your target system. Please install the product and retry the installation. The setup can be downloaded from <http://www.hagenberg-software.at>.

f) "A later version of SharePoint Picture Upload is already installed. Setup will now exit."

The version of the setup you want to install is older than your current installed version of Picture Upload. Please download an actual version of the product from the Hagenberg Software SharePoint product homepage (<http://www.hagenberg-software.at>).

g) "Deployment wasn't successfully! Please try it manually from the startmenu."

There was an error during the SharePoint solution installation. The solution deployment can be executed manually with the deployment link in the start menu. Go to Start->Programs->Hagenberg Software->SharePoint <Product> -> and click on the HSG <Product> Deployment link. A batch file is executed, which deployed the solution on the SharePoint.

2) You find the following error in the installation log-file: **"Object reference not set to an instance of an object"**

a) This error seems to occur if the user which is installing the solution has insufficient rights (e.g. is not SharePoint farm admin). Please retry the deployment process manually from the Windows startmenu (All Programs → Hagenberg Software → SharePoint Picture Upload → HSG Picture Upload - Deployment).

3) You find the following error / warning in the installation log-file: **"<XXX>.wsp" does not exist in the solution store**

a) The warning occurs if the desired SharePoint solution is installed for the first time. The installer tries to uninstall a previous version of this product, but for the first installation there is no previous version.

b) The warning may occur during uninstalling the SharePoint solution. This happens if the solution was retracted / deleted manually from the SharePoint before.

	Installation and user guide	Version 2.0
	SharePoint Picture Upload Plus	Page 11 of 12

4) The following error occurs:

a) „No ScriptManager found! - Read installation guide.”

No Script Manager was found in the master page. Just read Section 3.3 of this document.
